

Showcase Project – Sharepoint Application Development

G-TECH is an award-winning national provider of Talent Management and innovative Technical solutions. For more than 30 years, we have consistently delivered specialized professionals, services, and products to our clients to enhance business operations and transform organizations.

Background: In 2016, a major Fortune 1000 bank wanted to develop and provide their business units a cost effective and agile source to design and build SharePoint Applications as needed. Our firm was chosen to create an off-site Agile team to respond to the bank's requests for SharePoint development.

Approach: Using Microsoft best practices, Amazon Web Services (AWS) Cloud and Agile methodology, our team responded immediately to the bank's requests for the development of new SharePoint applications and continues doing so today. We use AWS to provide Cloud based Development and Test Environments that allow us to collaborate effectively with our banking customer. Using the Bank's SDLC and Project Management Processes, our team is working effectively with the IT Department to provide as-needed support for application design, development and enhancement.

Solution: Our team continues to provides an easily accessible, agile and cost effective approach to provide SharePoint Application Design, Development, Testing and Deployment services. We have over 300 employees and our customers include major banking, utility, insurance and government organizations. We are a Microsoft Network Partner and an Amazon Web Services partner. We have Senior Level Architects, Developers and Administrators who lead our successful SharePoint practice.

Results: Our seamless approach has allowed the bank to reduce costs and ensure that when requests for SharePoint sites are received that the IT department can rapidly respond to those request without delaying other mission critical projects.
